

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

wing, 48 cm.; tail, 20 cm.; tarsus, 8 cm.; length without bill, 89 cm. Weight, $11\frac{1}{2}$ lbs.

The books say the bill of this species is entirely purplish red in life, but the bill of this specimen was of a straw yellow, the purplish red being confined to two stripes parallel to the culmen. The other species was a male of the Hutchins Goose (*Branta canadensis hutchinsii*): Measurements: Extent, 153 cm.; bill, 5 cm.; tarsus, $7\frac{1}{2}$ cm.; wing, 43 cm.; tail, $16\frac{1}{2}$ cm. (14 tail-feathers); length, without bill, 78 cm. Weight, $5\frac{3}{4}$ lbs. Both specimens are now in my collection. The Hutchins Goose is to my knowledge the first Ohio specimen preserved in one of the collections of the state. It is indeed a streak of good luck to secure two such rareties in one day.

ADDITIONS TO THE BIRDS OF OHIO.

LYNDS JONES.

Anhinga anhinga.—Anhinga. Mr. C. H. Morris informs me that a specimen of this southern species was taken in the Muskingum river at Lowell, Ohio, in Morgan county, in November, 1885, by a Mr. Davis. The specimen was mounted by Mr. Davis and is now in his private collection. Mr. Morris photographed the specimen and sent a print to me. At the time of writing this note particulars are wanting, but they will be ascertained and announced later. This species should be added to the list of Accidental Birds of Ohio.

Milvulus forficatus.—Scissor-tailed Flycatcher. Robert McCrory, Esq., reports a specimen of this southwestern species at Marysville, Ohio, the last of May, 1903. A careful description and sketch sent with the announcement seem to leave no doubt of the authenticity of this identification. Particulars are lacking at this writing, but will be forthcoming for the next issue of the Bulletin. This, if corroborated, is the second occurrence for this bird in Ohio.
